

“Build a small enterprise at school-Promote your country abroad”

The school project “**Olive Soap**” operates successfully at the Second Regional Gymnasium, Nicosia – Malouna and carries out social work. Students produce soap from olive oil. “**When nature met beauty**”, the students of the Second Regional Gymnasium Nicosia – Malouna proceeded with the establishment of an “iconic business project” for the production of soap from olive oil, within the frame of the educational program “Build a small Enterprise at school-Promote your country abroad”.

In their “own” business, students take up different professional roles. They produce handmade biological soap which they sell and with the money they collect they help their needy classmates. The students have also proceeded in establishing a student business named “The live soap” aiming at producing and selling handmade soap from virgin oil in solid form, using solely biological raw materials.

The students have unanimously agreed to constitute a company aiming at the production of attractive products which on one hand will address a large number of consumers and on the other hand will be friendly to the environment and to the health of human beings.

The company “The olive soap” was constituted on 2/10/16, after the constitution of the company was set and 25 shares were published at the price of 10 euros each.

The managing group of the company consists of the following people:

General Director, Managing Advisor, Finance Manager, Production Manager, Marketing Manager, Sales Manager, Packaging Manager, Quality Control Manager, Research and Development Manager.

The main aim of the business project is “**to satisfy those consumers who are interested in ecological products of personal hygiene**” (bars of soap). Another important aim of the business project is the allocation of the profits to the Provident Fund of our school.
